

UKRAINIAN ASSOCIATION OF MEDICAL TOURISM

RECOMMENDS

2021

DENTAL

- Dental Implants
- Veneers
- Gum Surgery
- Bridges
- Root Canal

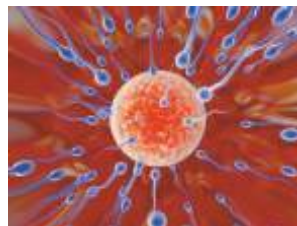

COSMETICS

- Botox (Disport)
- Forehead/Brow Lift

- Liposuction
- Rhinoplasty (Nose Job)
- Breast Implants
- Tummy Tuck
- Buttocks Lift

FERTILITY

- IVF
- Hysteroscopic Surgery for Fibroids
- Tubal Ligation Reversal
- Artificial Insemination (AI)
- Surrogacy + IVF
- Tubal Ligation
- Laparoscopic Surgery for Endometriosis (PCO)
- Embryo Freeze

HEART SURGERY

- Coronary/Heart Bypass (CABG)
- Angioplastic
- Pacemaker Surgery
- Heart Valve Replacement
- Angiogram
- Heart Valve Repair
- Mitral Valve Repair
- Implantable Cardiac Defibrillators (ICDs)
- Arterial Septal Defect (ASD)
- Patent Ductus Artery (PDA)

EYE SURGERY

- LASIK eye Surgery
- Glaucoma Surgery
- Cataract Removal
- Implantable Collamer Lens (ICL)
- Strabismus Surgery
- Degenerative Myopia

MEDICAL SPA

- Baths
- Balneotherapy
- Drinking Cures
- Inhalation application
- Peloid therapy
- Hydrotherapy

ONCOLOGY

- Diagnosis based on current international standards
- Surgical treatment
- Chemotherapy
- Radiotherapy

ORTHOPEDIC

- Hip Replacement& Resurfacing
- Knee Replacement
- Ankle Join Replacement
- Shoulder Replacement
- Knee Arthroscopy

Introductory message from Chairman of UAMT

Dear friends and colleagues!
Дорогі друзі та колеги!
Дорогие друзья и коллеги!

The medical tourism market is recovering. This is the statement I want to start your acquaintance with the participants of our annual, already eighth in a row Catalog «**UAMT Recommends**». This phrase is confirmed by the gradual recovery in the number of flights, and the growth of tourist flow between many countries, and the number of medical tourism providers that are actively present on the market again.

These two coronavirus years have taught us a lot. We have become stronger. However, the issues of the service quality, the effectiveness of treatment and the safety of the patient are always in the first place for recommendations and the right to be in this Catalog.

I am glad that we can recommend to potential users of services both our permanent members, who annually confirm their high status, and new clinics and companies from Ukraine, Germany, Turkey, Israel, Poland, Latvia and Austria. All of them are very worthy and reliable organizations that will certainly be able to help you.

The principle of this Catalog remains unchanged - it displays all the basic information that will help patients from different parts of the world seek help directly. Achievement of this goal is possible thanks to the distribution of the Catalog at specialized events, in embassies, partner organizations, as well as online.

Stay with UAMT and you will always be ahead.

Our motto is «Let`s develop together!» evolved into «Be among the leaders!»

Ukrainian Medical Tourism Association recommends!

Violetta Yanyshenska,
MD, MBA,
President of the Ukrainian Association
of Medical Tourism - UAMT,
Honorary President of the Global Healthcare
Travel Council – GHTC

The Rivne Interregional Medical Cluster

The Rivne Interregional Medical Cluster is an innovative platform for interaction between various medical, health, rehabilitation medical clinics and companies, whose task is to find the best solution to any medical problem for each patient and client.

We offer a full range of professional services for the organization of high-quality and modern treatment, rehabilitation and health improvement in the best medical institutions of the Rivne region and the surrounding regions.

The main directions of the cluster are:

- Orthopedics and Traumatology
- Sports injury
- All types of dental services
- Obstetrics and gynecology. modern methods of obstetrics
- Plastic surgery
- Rehabilitation after injuries and strokes
- Oncology and Oncosurgery
- Reproductive medicine
- Minimally invasive surgery
- Interventional cardiology and arrhythmology
- Medical equipment and medical products

Also, our educational activities are aimed at professional improvement, simulation methods of teaching doctors according to European programs, the development of competencies in management, medical law, business organization and communication. The cluster provides a full range of services - from arrival, accommodation, meeting, to consultation, treatment, rehabilitation.

Also, the organization of the accompanying leisure and his accommodation. The health of the child will be taken care of at the MC "BEYBIDOK"; in the modern private clinic "RoDENT" will provide a variety of dental services for treatment and prosthetics; the Rivne maternity hospital will provide the full range of obstetric and gynecological care; RivneMED clinic specializes in complex orthopedic and traumatological operations; Rivne central city hospital offers multidisciplinary care.

Rivne maternity hospital

An individual approach to the management of childbirth from the moment a woman arrives at the clinic until discharge, including a separate delivery room, family wards, individual care for a newborn child, help for a mother in the postpartum period, and services. These are various modern methods of obstetrics that the expectant mother can choose herself. Free behavior in childbirth is encouraged, vertical childbirth is possible. Comfortable conditions have been created for partner childbirth.

The maternity hospital is equipped with everything necessary to protect the health of a woman in labor and a newborn baby. The equipment of the maternity hospital allows, if necessary, to carry out an emergency caesarean section on the spot. The neonatal intensive care unit is equipped with the latest equipment for nursing children with low birth weight and those born prematurely, to provide assistance in the complicated course of the early adaptation period. There is a possibility of an individual choice of an obstetrician-gynecologist for the management of childbirth.

In the gynecological department of the maternity hospital, planned and urgent medical care is provided 24/7. There are two laparoscopes and two hysteroscopes, which makes it possible to carry out surgical treatment with minimally invasive methods

Clinic «RivneMed»

The RivneMed Clinic has a modern Center for Orthopedics and Sports Traumatology, which provides a full range of orthopedic services in the field of prevention, diagnosis, treatment and rehabilitation of injuries and diseases of the musculoskeletal system.

Areas of activity of the RivneMed Center:

- diagnostics of injuries and diseases of the musculoskeletal system
- conservative treatment of injuries and diseases of the musculoskeletal system
- arthroscopic operations on joints of any complexity.
- ultrasound examination of internal organs, joints, vessels.
- surgical interventions in traumatology and orthopedics, treatment of pain syndrome of the ridge and joints,

And most importantly, the clinic employs a team of highly professional doctors and nurses who have repeatedly undergone international internships and trainings, are constantly developing and improving their skills.

Private enterprise «Firma Pharmiks»

The private enterprise «Firma Pharmiks» has more than 20 years of experience in providing medical institutions in Ukraine with medical products, medical instruments and equipment.

We are the exclusive representative of AquaMedical in Ukraine - medical ultrasound gel, thermogel, Official representative of QZA surgical instruments, supplier medical dressings CJSC «BIOTEKFARM» TM «All will heal» on the territory of Ukraine.

We are actively introducing new products of world manufacturers into the medicine of Ukraine, we take part in international exhibitions and conferences (Dusseldorf, Dubai, Malaysia, Germany, etc.)

Main directions of activity:

- wound coverings
- the latest technologies in the field of dressings that meet all the requirements of modern medicine
- ultrasonic gel and for laser procedures, as well as gel cooling and warming compresses
- surgical instruments of varying complexity of production and different areas of medical practice, produced in Pakistan (we will send the catalog on request)
- laboratory diagnostics (reagents and equipment, chemical products, disposable products, disinfectants and protective equipment).

Ternopil University Hospital Center for endoprosthesis and the latest orthopedic and traumatological technologies

The Orthopedic and Traumatology Department provides highly qualified medical care to patients with degenerative diseases and injuries of the musculoskeletal system.

The main activities of the department:

- Endoprosthesis of the hip and knee joints, revision arthroplasty
- Surgical treatment of skeletal fractures of the upper and lower extremities
- Pelvic and acetabular, hand and foot surgery
- Corrective osteotomy for congenital and acquired deformities of the limbs
- Orthogeriatrics and periprosthetic fractures
- Arthroscopy of the knee, shoulder, ankle joints
- Spinal surgery
- Plastic surgery to replace bone defects and soft tissue defects of the extremities

 Ukraine, Kiev,
st. Kudryashova, 9

Institute of Cell Therapy

Institute of Cell Therapy is a unique research and development, manufacturing and clinical complex, due to the level of laboratory and technical equipment, has no analogues in Ukraine and neighboring countries.

A special **pride of the Institute of Cell Therapy is own Cryobank of stem cells and human tissues, equipped due to the latest technologies.** The structure of Cryobank also includes biotechnological laboratory that develops and manufactures unique cell preparations, cell culture laboratories, diagnostic laboratories, including own PCR laboratory.

Uniqueness of elaborations of the Institute of Cell Therapy scientists is confirmed by more than 30 patents and certificates in the field of cell therapy and cryobiology.

Institute of Cell Therapy has a license of the Ministry of Health of Ukraine and technological equipment of cryobank and clinic comply with GLP standards and ISO 9001:2015. All employees of the Institute of Cell Therapy were trained in Europe, USA and Japan. Our partners include leading medical research and educational institutions of Ukraine, Europe and North America.

Institute of Cell Therapy includes modern multiprofile clinic that provides all kinds of medical services, including treatment of diseases using the latest achievement of cell technologies, unique beauty services and individual programs of anti-age therapy.

The main activities of Institute of Cell Therapy are:

- Stem cell therapy for diseases such as diabetes mellitus, critical limb ischemia, liver cirrhosis, hepatitis, diseases of the joints, cardiovascular diseases, etc.;
- Anti-age therapy and rejuvenation of the body;
- Therapeutic and beauty programs using placenta extract.

To date, the Institute of Cell Therapy has successfully treated more than 6,000 patients, including not only the citizens of Ukraine, but also patients from the European Union, USA, Middle East and China.

Today, we offer our patients a full examination of the body using the most modern equipment, effective treatment of a number of serious diseases using cell technologies in a comfortable clinic, individual programs of anti-age therapy and unique services of detox clinic.

GOOD CELLS

GOOD CELLS is a Ukrainian innovative medical company with a powerful biotechnology laboratory, clinic and its own cryobank. The company has taken over the direction of cellular technology of ilaya.regeneration and continues to create innovative biotechnological products and treatments.

Today **GOOD CELLS** produces a wide range of biotechnological products ranging from simple blood products to various stem cell types and cell-free products used in therapy, rehabilitation, rejuvenation.

The company offers unique types of stem cells, such as: neural crest-derived stem cells for nerve tissue repair and endometrium-derived multipotent mesenchymal stem cells for female infertility treatment.

Main activities:

- Therapy for various diseases, including rare diseases.
- Rehabilitation after COVID-19.
- Rehabilitation after sports injuries.
- Rejuvenation. Exosomes and dermal fibroblasts are widely used in dermatology, cosmetology and trichology.
- Bioinsurance for newborns, children and adults

GOOD CELLS is the only biotechnological company in Ukraine that offers isolation and storage of up to 5 types of cells isolated from postpartum tissues.

Our advantages

- **> 95%** - a viability of stem cells.
- **triple quality and safety control** of all biotechnological products.
- **cultivation in low oxygen conditions**, which prevents the aging of cells during production and, as a result, preserve their therapeutic potential.
- **the cell culture passport** is issued for each therapeutic dose. This is a certificate with all the characteristics of product quality.
- **21 days** - the fastest time to prepare a therapeutic dose.
- **individual support of the partner and the patient** always and in everything. Assistance in taking the master bank abroad.

With GOOD CELLS you can:

- purchase a treatment program
- buy a therapeutic dose of stem cells
- conduct scientific cooperation
- implement charitable projects in the field of medicine
- order the production of a biotechnological product/the graft inoculation with autologous stem cells.

GOOD CELLS. The best biotech solutions for everyone

We know how to save and improve what was given by nature

Medical center of stem cell technologies, plastic surgery and biorevitalization **Deva Clinique** medical complex is located in the historical heart of Kyiv. **Deva Clinique** medical complex hosts:

- a clinic
- a certified research and laboratory complex
- a cryobank with its own cryogenic storage to preserve cord blood, umbilical cord, dental (baby teeth) stem cells and HP extract

The **Deva Clinique** team has over 15 years of experience in running research and implementation of stem cell treatment techniques.

Our stem cell treatment methods for Crohn's disease and diabetes mellitus, as well as their use in plastic surgery, were recognized by leading stem cell professionals at Stem Cell Summit 2017 and 2018 in Boston (USA).

Deva Clinique offers the patients isolation, cultivation, cryopreservation and medical use of stem cells (mesenchymal stem cells and neural crest stem cells) of our patients and autologous (own) skin fibroblasts.

Deva Clinique makes effective use of stem cell therapy for the treatment of the diseases of cardiovascular, endocrine, reproductive systems, as well as for anti-aging medicine, cosmetology, plastic surgery, neurology, immunology, traumatology, and orthopedics.

Deva Clinique stem cell therapy offers the comprehensive effect:

- improving performance and prolonging an active lifestyle
- blood pressure stabilization
- improving potency and libido, hormonal balance, increasing muscle strength
- improving psychomotor reactions, memory and thinking, sleep normalization
- elimination of chronic fatigue syndrome
- prevention of age-related diseases
- stem cells stimulate the immune system, improve microcirculation throughout the body, which contributes to the regeneration of all the body tissues

We develop an individual treatment regimen for every patient.

Deva Clinique uses unique methods of treatment using HP extract, aimed at increasing of male and female fertility and sexual activity. Using placental extract is highly effective in the complex treatment of tubal infertility and miscarriage syndrome.

At **Deva Clinique**, body plastic and bariatric surgeries are performed by the high-class surgeons who also operate in Europe and the U.S.

Deva Clinique has developed a unique stem cell treatment program for emotional burnout patented by our clinic.

We not only deal with symptoms of diseases but also with the causes. It helps improve the well-being and complete recovery of our patients.

Kyiv, Ukraine

Since 1994, **Cell Therapy Center EmCell** offers advanced patented methods of fetal stem cell treatment for different diseases and conditions. The fetal stem cells we use have the highest potential for differentiation into other cell types and are not rejected by the recipient's body.

Treatment we offer:

For Adults:

- Anti-aging
- Diabetes I and II types
- Neurological degenerative conditions (PRK, ALS, ALZ, MS)
- Heart insufficiency treatment
- Male and Female Infertility treatments

For Kids

- Autism Spectrum Disorders, Developmental Delay and ADHD
- Muscular dystrophies (Duchenne's, Becker's, FSHD, LGMD)
- Diabetes type I
- Cerebral palsy

Clinical Department

EmCell's clinical department consists of highly qualified medical doctors, who are the original authors of **EmCell's** patented technology. Some of our medical doctors have been with us since our beginnings, holding additional scientific degrees such as PhDs. Our clinical department is also supported by highly qualified nurses and assistants, while also serving as a diagnostic center including ultrasound, ECG, EchoCG, Doppler, Spirography, Densitometry, and more.

Laboratory Complex:

- Biotechnology Laboratory
- R&D Department
- PCR Laboratory
- Clinical-Diagnostic Laboratory
- The Cryobank

The heart of the Laboratory Complex is a GMP compliance Biotechnological Laboratory, where the fetal stem cell preparations are created in accordance with unique original technology developed by our scientist's team. We stay in touch with contemporary technologies and we use the most relevant techniques and modern equipment to ensure the highest quality and total safety of our products.

EmCell handles the entire cycle of preparing, testing, storing and clinically applying fetal stem cells. We believe that in-house preparation and administration of stem cell suspensions is the only way to ensure its safety and the best treatment results.

We care about our patients and our reputation worldwide. The best award for **EmCell** is successful treatment and improvements in our patients, their words of gratitude and smiles on their faces.

SPIZHENKO CLINIC - 11 YEARS OF INNOVATION IN MEDICINE

In 2009, the **Spizhenko Clinic** was founded by an academician, a practicing surgeon and the first minister of health of independent Ukraine Yu.P. Spizhenko. The only medical center in Ukraine and the first in Eastern Europe, where the treatment of tumors was started using a unique technology - the **CyberKnife radiosurgical system**. Without contact with biological tissues, without incisions, without blood and pain - radiosurgery opened access to treatment where it was impossible to apply surgery.

Spizhenko Clinic is an Oncology Center that combines all existing methods of treatment and diagnostics, a full-cycle clinic.

- Radiosurgery - Cyberknife
- Radiation therapy - 2 Linear Accelerators
- Chemotherapy including hematology
- Surgery of all localizations and levels of complexity
- Coloproctology-Gynecology-Urology-Neurosurgery-Mammology-Thoracic Surgery
- Center for complete diagnostics MRI-CT-ultrasound-mammography-endoscopy-laboratory
- 12 years of experience in treatment with the CyberKnife system
- All types of tumors and the most complex localizations
- More than 2500 treated patients
- Combination Cyber Knife + IMRT
- The first linear accelerator Versa HD in Ukraine. Flagship in the class of radiotherapy (Best in class 2019-2020)

Cyber Knife is a robotic radiosurgical system designed to treat benign and malignant tumors of any location.

The **Cyber Knife System** is a modern non-invasive therapy that is an alternative to surgical treatment and is capable of delivering high doses of radiation directly to the tumor with unique precision, significantly reducing the risk of radiation damage to healthy tissues.

With the advent of the Cyber Knife system, it became possible to provide assistance to those patients in whom surgical intervention is associated with a high risk of complications, or if the patient refrains from surgical treatment on his own.

Why CyberKnife Treatment?

CyberKnife treatment is recommended for the treatment of cancer in patients for whom conventional surgery may be at greater risk. These are patients whose health conditions are not stable, or patients who have tumors that are difficult to access for surgery.

CyberKnife is most commonly used to treat brain tumors, especially deep brain tumors that are difficult to remove during surgery.

CyberKnife treatment is also widely used for pituitary and spinal cord tumors. Other cancers for which CyberKnife can also be used are kidney, breast, pancreas, prostate and skin cancers.

However, the use of **CyberKnife** is not limited to cancer therapy, it is used to treat epilepsy and movement disorders such as Parkinson's disease.

The Versa HD™ Linear Accelerator is the latest advancement in cancer treatment technology. The device is designed for a new generation of radiation therapy and is used to perform a full range of radiation therapy procedures, from comfortable radiation therapy to the most complex techniques, including stereotaxic radiation therapy and radiosurgery.

Its uniqueness is that in **one accelerator all the latest methods of radiation therapy IGRT, IMRT, VMAT, SRS, SBRT are combined.**

The Versa HD™ system uses an innovative high dose rate (FFF - Irradiation Without Equalizing Filter) irradiation mode to deliver radiation doses to the patient three times faster than previous generation linear accelerators. The duration of a conventional radiation therapy session has been reduced significantly and only a few minutes are enough for a daily radiation session.

Our accelerator is equipped with a **unique Agility™ multi-leaf collimator**, equipped with 160 high-resolution blades, which allows you to shape the irradiation field with dimensions of 40 x 40 cm and achieve the highest level of conformity to the target shape. The multi-blade collimator blades move at twice the speed of any industry.

Versa HD™ is a linear accelerator that combines the capabilities of radiotherapy and radiosurgery with millimeter precision.

The technologies used make it possible to significantly reduce the number of radiation sessions, increase the accuracy of radiation guidance, provide an opportunity for improved visual control, increase the speed of the procedure and minimize the exposure of healthy organs as a result of their movement. New functions for creating and applying radiation, borrowed from different devices assembled in one unique system for radiation therapy, have opened the door to a whole new era of cancer treatment.

WORLD FIRST OPERATIONS

We were one of the first in the history of world medicine to perform a **unique radiosurgery for eye tumors**. As a result, the patient managed not only the affected organ, but also the vision. Until then, the only treatment option for uveal melanoma was to remove the eyeball. A similar treatment was carried out for cancer of the only kidney, where we showed aerobatics on a par with the best medical centers in the USA and Europe.

Since then, for more than 11 years, the **Spizhenko Clinic** has been a leader among innovations and high technologies in medicine. During this time, we have become the largest base for clinical trials, a center for training specialists to work on **Elekta linear accelerators, and the CyberKnife radiosurgical system**. Introduced the most innovative systems for diagnosing diseases with artificial intelligence technology.

Clinic of European Oncology

INNOVATION oncology clinic was opened in October 2009.

The patients from many countries use the services of the our clinic. **INNOVATION** is an oncological clinic, providing a modern, European approach to the diagnosis and treatment different types of cancer.

The clinic has all necessary equipment, qualified specialists, medicines and technologies to provide specialized care for patients with malignant and benign diseases. In its work, the clinic uses the most modern standards of treatment of cancer, which are based on the principles of evidence-based medicine, Doctors of clinic received training and internship in best clinics of France, Israel, Germany.

In 2021, the clinic received another official international recognition, which was confirmed by the **ISO 9001-2015 certificate**, and the Ukrainian **DSTU ISO 9001: 2015 certificate**. The certification was carried out by the Austrian international certification company Qualityaustria.

Medical services:

- Oncology
- Gynecology / oncogynecology
- Breast cancer
- Hematology/oncohematology
- Surgery/Oncology Surgery
- Plastic and Reconstructive Surgery

In clinic «**INNOVATION**» a full cycle of diagnostic and cancer treatment, which is extremely important for quick decisions and providing highest level of service.

The clinic – «INNOVATION» uses advanced methods of diagnosis and treatment:

- Radiation diagnostics
- Nuclear diagnostics
- Endoscopic diagnostics
- Clinical diagnostics
- Pathological diagnosis and immunohistochemical diagnostics.
- The molecular and genetic diagnostics
- Radiotherapy
- Chemotherapy (hormone therapy, targeted therapy)
- Immunotherapy
- Surgery (minimally invasive, plastic, reconstructive)
- Rehabilitation

The subject of special attention in the clinical breast center of «**INNOVATION**» is involved in the diagnosis and treatment of benign diseases. Since 2013 the breast center clinics is part of a worldwide network of breast centers Breast Centres Network. It shows that the center uses the most advanced technology in the leading clinics of the world.

Since September 2021, on the basis of the clinic «**INNOVATION**», a **melanoma treatment center** has been created, where it is engaged in the diagnosis and treatment of melanoma (skin cancer) at the most modern level.

Despite the statistics of cancer, our professional approach makes it possible to treat the disease with the most modern techniques to improve the quality of life and give hope to cancer patients.

«**Floris**» Medical Center is a multi-profile state-of-art and high-tech medical center in the city of Sumy, known for high-quality diagnostics and use of innovative methods of treatment.

Our advantages:

- Over 20 years on the medical service market
- Fully-equipped departments of expert diagnostics
- Up-to-date laboratory of European level
- Consultancies of 53 doctors of 32 specialties
- High level of service and comfort for the patients

Offered investigations

1. **USI** equipment of expert class from the best world manufacturers makes it possible to detect diseases at the earliest stages. We have our own-patented methods of investigation.

2. Fully-equipped department of **X-ray diagnostics**:

- Modern multislice **computed tomography**. This method allows to see changes in the abdominal and small pelvis organs (liver, kidneys, pancreas, etc.), chest organs, brain, including small pathology (up to 2-3 mm).

- Unique dual-power **X-ray densitometer** Discovery C allows for accurate assessment of the state of bone tissue. This study is the 'gold standard' of osteoporosis diagnostics.

- **Mammography**. Highly effective method for diagnosing breast diseases in women. Thanks to modern equipment, masses can be detected at the earliest stages.

- Philips digital **X-ray system** delivers the highest-resolution images while minimizing the patient exposure.

3. Our **laboratory** of the European level, which is the best in the region, provides a full range of laboratory tests, using only original reagents. It has undergone international certification and is constantly subject to the quality control.

4. Olympus video **endoscopy system** provides unparalleled imaging accuracy and quality allowing to maximize diagnostic performance and receive the most precise result.

Offer for the foreign patients.

When it comes to health care, there should be no geographic boundaries, and we are committed to provide proficient medical services to the patients from any place of the world!

We take care about the emotional background of our visitors; therefore, we created comfortable conditions for the patients staying in our center.

«Floris» Medical Center offers:

- development of an individual diagnostic and treatment plan for each patient;
- execution of an invitation for treatment to facilitate crossing the state border;
- a dedicated manager who will accompany the patient to the medical center;
- communication in English;
- translation, interpreting and analysis of anamnesis, previous investigations;
- transfer, accommodation, accompanying the patient to other medical institutions in the country, if necessary.

Ocular – the institute of ophthalmology

«Ocular – the institute of ophthalmology» is a new ophthalmological medical center for adults and children located in a six-story building in Kyiv city center. The medical center was opened in June 2020 and is offering medical services for the treatment of all kinds of eye diseases. Ocular's medical practice is organized around a deep specialization in each of the ophthalmological subspecialties. The medical center was opened after more than a year of reconstruction on the building to meet the high standards of our medical center. Every corner of our center was adopted to the idea of creating conditions for the best ophthalmological medical practice.

Ocular is a full-service ophthalmological medical center. The Diagnostic Unit occupies the first and second floor and consists of **7 consulting rooms** and **4 rooms with specialized diagnostic equipment** for checking the anterior and posterior segment of the eye. The Diagnostic Unit is equipped with 42 pieces of equipment manufactured in 2019-2020 in the following countries: Switzerland, Germany, Korea, Australia, Japan and Italy.

The thorough approach to diagnostics and the remarkable precision of the newest equipment allows analyzing of the patient's eye condition in its entirety, not only following the patient's complaints, and to identify diseases that may be asymptomatic.

The Medical Center engages the services of 12 ophthalmologists for adults and children. A highly specialized unit has been formed at the medical center for each of the ophthalmological subspecialties. The head of each unit is the operating doctor of the respective ophthalmological subspecialty. Operating doctors have PhD degrees and more than 10 years of work experience.

The heart of our medical center is surgery. On the third floor there is an operating room for laser vision correction. It's equipped with two ultra-modern lasers manufactured in Germany: (1) Schwind Amaris 1050 (limited edition series) and (2) VisuMax by Carl Zeiss.

Today we can offer our patients four methods of the laser correction - **SmartSurf (or TransPRK), LASIK, FemtoLASIK and ReLEx Smile**. We are the first and the only clinic in Kiev that offer the ReLEx Smile method of a flapless laser correction. This method has been used in European countries and in the US for over 20 years, which is considered to be the gold standard in the world that combines the benefits of all other methods of the laser correction.

Beside that we can offer a procedure of crosslinking for patients with keratoconus.

Our surgery block occupies the fourth floor of the medical center and consists of two operating rooms and an intensive care unit.

We perform the following types of eye surgeries:

- **Surgeries on the anterior segments of the eye:** cataract and glaucoma. For cataract surgeries, we use the high-quality lenses from German and American manufacturers. We offer four types of glaucoma surgeries - penetrating and non-penetrating trabeculoplasty, as well as the placement of shunts and valves. In addition, at an early stage, it is possible to perform the SLT laser procedure with the laser of the latest generation produced by the Australian company "Ellex". Today we offer surgical treatment of glaucoma instead of the widespread treatment with the eyedrops, which can help patients to prevent the development of this disease for decades.

- **Surgeries on the posterior segments of the eye:** in case of traumatic damage of the retina, diabetes with complications and retinal detachments. However, the treatment of the retina and the diseases of the posterior segment of the eye is not limited to surgeries. Our medical center also offers retinal laser treatment and intraocular injections of special drugs (anti-VEGF inhibitors), that are prescribed depending on the type and stage of the disease.
- **Reconstructive and aesthetic surgeries of the eyelids,** including blepharoplasty of the upper and / or lower eyelids, eversion, volvulus, chalazion and neoplasms.
- **Strabismus surgeries** for both children and adults.

In case a patient suffers from several eye diseases, it is possible to perform **combined surgeries** – for instance, in case of the retina disease combined with cataract, or the glaucoma disease combined with cataract. In these cases, surgeries are performed simultaneously, by one or two surgeons. Such an approach allows to reduce the traumatic effect of the surgery on the patient and expedite the desired outcome.

The clinic has its own **anesthesiology department represented by children and adults anesthesiologists**. The building is equipped with pipelines that supply the operating rooms and the intensive care unit with medical gases. The existing setup allows our doctors to perform surgeries both under local and general anesthetic. Our medical center offers a variety of anesthesia types: drop anesthesia, retrobulbar anesthesia, sedation, intubation and mask anesthesia. There is also an option to perform diagnostic procedures in children under anesthesia.

Most operations are done on an ambulatory basis and the patient can be released from our medical center at the same day. However, the clinic is equipped with two single rooms for extended stay, if needed.

A separate area of our practice is **the correction of visual acuity with glasses and lenses**. We have a huge variety of soft and hard scleral lenses to choose from.

The medical center cooperates with the manufacturers that are specialized in producing customized soft and hard contact lenses, according to the patient's personal measurements, that ensure the perfect fit of the lens and maximum wearing comfort. A separate area of our practice is the correction of vision of adolescents with the help of hard (night) lenses. This method helps to prevent the loss of vision and allows to avoid wearing glasses or soft lenses during the day. In addition to that, our own optical store offers a wide selection of optical lenses, most of the positions are ordered individually for each patient, according to the doctor's prescription. Also, we provide a wide selection of branded eyeglass frames and sunglasses to our patients according the latest fashion trends; more than 25 leading global brands in the eyeglass fashion industry are represented in our store.

The development of ophthalmological science and practice is one of the priorities of our clinic. In this regard, we are open for cooperation with foreign ophthalmologists to exchange experience in the field of the eye diseases treatment.

Multidisciplinary medical center «Medical Plaza»

«Medical Plaza» is a multidisciplinary medical center, the main advantage of which is the teamwork of all specialists.

«Medical Plaza» has the **highest category of state accreditation and quality management system certificate ISO 9001:2015, certification of measuring systems of clinical diagnostic laboratory ISO 10012:2005, «Clean Hospital»** certificate from the service of organization of infection control and the Nurses Association.

«Medical Plaza» participates in world-wide cancer trials (clinical trials programs of international pharmaceutical companies MSD and PSI). Our patients receive modern chemotherapy according to international protocols. Our patients receive full complex of medical treatment: diagnostics, surgical treatment, chemo-, immunotherapy, follow-up care.

Main directions of the medical center:

- treatment of all forms of infertility
- Routine and emergency surgical care

From the first days our medical center successfully helps to treat all forms of infertility applying assisted reproductive technologies (IVF program), has its own cryobank. Over 600 babies have been born with the help of specialists from the department. The efficiency rate is 60-65%, which corresponds to the world level.

DA VINCI SURGICAL SYSTEM robotic surgical complex.

Since 2021, the center has been performing complex surgical interventions using the da Vinci robotic system.

Robotic surgery is a modern form of minimally invasive robot surgery intervention controlled by surgeon's hands. **Laparoscopic robotic surgery allows high-precision surgery in the most difficult confined spaces with minimal damage of tissues and important anatomical structures.**

The effectiveness of this surgery is that robotic arms are much more adaptable to delicate work, with minimized tissue trauma inside the cavity. This allows the surgeon to make more precise movements, reducing the risks on the operating table. Robot-assisted surgery is widely used in:

- Urology (prostate cancer; kidney tumor (kidney resection, nephrectomy); bladder cancer; anomalies and injuries of the urinary system; adrenal tumor)
- Gynecology (endometrial cancer, cervical cancer, uterine myoma, deep endometriosis, pelvic organ prolapses)
- Colorectal surgery (colorectal cancer, cancer of the sigmoid colon, rectal cancer, diverticular disease of the colon and rectum - colon resection, prolapse of the rectum)
- Abdominal oncology (cysts and neoplasms of the pancreas, tumor growths of the liver, malignant and benign neoplasms of the stomach)
- Bariatric surgery (morbid obesity of II and III degree - longitudinal gastric resection, bypass operations).

This system helps not only to reduce the trauma of tissues and but to decrease the risk of injuries. Thanks to the use of indocyanine green (ICG), it is possible to visualize anatomical structures by means of light in the spectral decomposition of the near-infrared range (NIR).

Medical center «MedicoMente»

European Level Addiction Treatment Center

Medical center of modern addictology «MedicoMente» is the only specialized clinic in Ukraine, where **all types of medical care are provided in one center**. «Derenivska Kupil» is a world of relaxation,
wellness and absolute comfort

The luxurious thermal wellness resort «Derenivska Kupil» is located among the Carpathian forests, near the ancient city of Uzhhorod. The complex is famous for its curative silicon water and a variety of options for relaxation and wellness. What is more, it is a unique area including an arboretum park with more than 5,000 plants from all over the world, reservoirs with fountains and a sculptural park with works of famous masters.

The **Sanatorium Complex «Derenivska Kupil»** features a modern hotel Iris with spacious rooms and a comfortable apartment a hotel for a family holiday. Here you will also find Wellness and SPA centres with a wide range of health, massage and beauty treatments, restaurants that offer organic cuisine among its key priorities, entertainment, recreation and sports areas.

Silicon water is one of the main treasures of «Derenivska Kupil». It is the basis of the entire healing process. The healing properties of Derenivska water have been known since the 16th century. Supplementing the quality of the unique water with modern equipment, the **Sanatorium Complex «Derenivska Kupil»** effectively uses its features in wellness and cosmetology. **Water extracted from artesian wells contains silicon and boron, which heal the musculoskeletal, cardiovascular, respiratory, nervous, endocrine, reproductive systems, as well as slow down the ageing process, rejuvenate the skin and all internal systems.**

Combine relaxation and recovery in stylish wellness areas: the Silver Baths SPA complex and the Iris Wellness Centre. To make your holiday here the beginning of your new life that will bring you maximum benefits, our experts have developed programs to improve health, prevent diseases, ensure body cleansing and comprehensive recovery.

«Derenivska Kupil» is also a thermal resort. The SPA-complex Silver Thermes combines a semi-open thermal pool with thermal, medicinal, mineral water Zakarpatska 2 (32 to 34 °C), operating throughout the year as well as an outdoor pool with fresh water, perfect for summer relaxation. This is a place where you can relax and have a great time while improving your health. Here you will find everything for wellness: a Roman bath, a Russian bath, a Finnish sauna, balneological and massage rooms, a contrasting foot bath, an ice fountain, a rain shower and a relaxation area with the picturesque views of the botanical garden.

Everything contributes to wellness and recovery in the **Sanatorium Complex «Derenivska Kupil»**, including the hands of professionals and the nature itself.

Inspiration, rejuvenation and a boost of energy are what
our guests take with them when they leave.

You will want to return to «Derenivska Kupil» again and again.

Dnipro, Ukraine

«HairMed»

The professional path of the «HairMed» team began in 2009 with a small trichology office. Thanks to active development and specialists with extensive experience in trichology, in 2021 in the city of Dnipro, Ukraine, the renovated and most progressive Hair Treatment and Transplantation Center «HairMed» opened its doors.

The area of the new center is 430 sq.m. and it is provided with the most modern equipment and has many locations:

- SMP room
- Consultation room
- Consultation and treatment rooms
- Two zones for hair transplantation
- Rest room for guests
- Relaxation room
- HairHub with 2 workplaces for a rehabilitation therapist, hairdresser / colorist
- Conference room

The «HairMed» Center employs a team of highly qualified specialists with vast experience in treating problems associated with hair loss, baldness and hair regrowth.

Despite their experience, they are not complacent and constantly improving their knowledge, mastering the world's advanced technologies and successfully applying them in practice. The team consists of:

- Trichologist-transplantologist
- Trichologist-dermatologist
- Rehabilitation therapist
- SMP specialist
- Beautician
- Surgeon oncologist
- Masseur

The leading specialist and founder of the Hair Treatment and Transplantation Centre «HairMed» - Baranov Ivan Viktorovich specializes in trichology and has been treating hair since 2009.

He performs procedures for treating scalp problems: from hair loss to serious types of baldness.

Provides both therapeutic and surgical treatment (hair transplantation).

He is a member of such associations as: ISHRS, WFI, UST (Ukrainian Association of Trichologists), UADV, EHRS, UHRS, USHRS.

Ivan Viktorovich is the only transplantologist in Ukraine who performs **hair transplantation using a unique, author's hybrid technique**.

The **Trivellini system** is applied for this technique. The device has several modes and their combination provides a high-quality transplant of all hair types.

In addition, the «HairMed» Hair Treatment and Transplantation Centre provides hair transplants on the head, beard area, sideburns and eyebrows by the following methods:

- **Long hair** - Long hair is removed from the donor area and implanted without shortening the patient's hair in order to see immediate results after surgery.
- **FUE (Follicular Unit Extraction)** is a microsurgical manipulation of obtaining grafts and their implantation without incisions and sutures.
- **DHI**. The follicles that are removed from the donor area are implanted using an implanter without opening the channel.

The Hair Treatment and Transplantation Center «HairMed» offers services that meet the world's requirements. Over the past few years, the center has had performed hair transplants for patients from more than 10 different countries.

«HairMed» is the state of the art equipment, world technologies and experienced specialists.

Intensive Neurophysiological Rehabilitation System

The Professor Kozyavkin Method

The **Intensive Neurophysiological Rehabilitation System (INRS)** is a highly effective treatment for patients with different neurological disorders, including cerebral palsy, motor developmental delay in children, scoliosis, sequelae of cerebrovascular disease and craniocerebral trauma, autism spectrum disorders, disturbance of activity and attention, etc.

The **Professor Kozyavkin Method** (INRS) was developed over 30 years ago. It is officially recognized by the Government of Ukraine and, thanks to its effectiveness, has won wide international recognition. More than 70,000 patients, including 17,000 from Germany, Austria, Switzerland, France, the United States and many other countries, have undergone rehabilitation under this method.

Today, the **Professor Kozyavkin Method** is applied in 5 accredited clinics, two of which are in Ukraine, one on Cyprus and 2 in United Arab Emirates.

The **Professor Kozyavkin Method** is a multimodal **rehabilitation system** in which the influence of one component is complemented and intensified by the others. Its main component is a biomechanical correction of the spine and large joints in combination with a set of treatment modalities: reflexotherapy, physical therapy, special massage system, rhythmical group exercises, mechanotherapy, apitherapy.

By stimulating the body's compensatory abilities and activating brain plasticity, the system creates a new functional state in children's bodies, thus helping them to develop motor and mental capacities much more quickly.

In 2014 – 2016 in **International Clinic of Rehabilitation** was carried out a thorough analysis of a group of patients who underwent rehabilitation by INRS. The group consisted of 4,309 patients who underwent 12,785 treatment courses. The chart clearly shows that, among the patients who previously lacked respective skills, 27.2% began to control their head movements, 15.5% – to crawl, 48.6% – to sit, and more than 67% began getting up and walking, while gait improved in 62.7% patients. In addition to improving specific motor skills, patients experience positive changes such as: improvement of speech and psycho-emotional condition, acquisition of new self-care skills, and enhancement of concentration and attention.

Indications for INRS rehabilitation:

- Cerebral palsy (spastic tetraplegia, diplegia, hemiplegia, dyskinetic, ataxic and mixed forms)
- Delayed milestone, Congenital malformations of the nervous system, other disorders of the brain (in term and preterm babies)
- Birth injury to the peripheral nervous system
- Sequelae of intracranial injury
- Sequelae of inflammatory diseases of the central nervous system
- Sequelae of cerebrovascular disease (hemorrhagic, ischemic stroke, cerebral infarction)
- Systemic atrophies primarily affecting the central nervous system
- Transient cerebral ischaemic attacks and related syndromes
- Migraine, headaches syndromes (cluster headaches, vascular and tension-type headache)
- Scoliosis (mild and moderate degree)
- Dorsalgia (Radiculopathy, Cervicalgia, Sciatica, Lumbago with sciatica, Low back pain, Pain in thoracic spine), Spondylosis
- Childhood autism, Autism Spectrum Disorders
- Disturbance of activity and attention (ADHD)

Rehabilitation courses, conducted at our branch on Cyprus, are supplemented by hydrokinesiotherapy. These procedures and the island's favourable weather conditions are important additions to the intensive neurorehabilitation system.

Teremky-2
Academika Williamsa 15 str.
building 1"

«VerMax» Medical Center

VerMax Medical Center has been operating in the market of dental services in Kyiv (Ukraine) since 2005 and has more than 20,000 patients.

Dentistry is located in Holosiivskyi district, on the Teremky-2 residential area, near three metro stations (Vasylkivska, Hippodrome and Teremky).

There are modern offices where four patients can be served at the same time. Clinic equipment from world manufacturers Castellini (Italy), KaVo(Germany), Planmeca (Finland) and equipment made in Japan.

We receive about 1,000 patients every month.

Services provided by the medical center:

- **therapeutic dentistry** - comprehensive treatment in all areas of therapeutic dentistry, caries treatment (causes, treatment and prevention);
- **endodontic treatment** (treatment of pulp, dentin, root canals);
- **pediatric dentistry** (all types of treatment of children's teeth (milk and adolescent);
- **surgical dentistry** (tooth extraction, oral plastic surgery of various types of complexity, etc.);
- **orthodontia** (correction of occlusion, alignment of teeth);
- **implantology** (restoration of lost teeth, because the implant not only solves the problem of missing teeth, but also removes the excess load from neighboring teeth and therefore preserves them);
- **orthopedics** (prosthetics - removable, non-removable), prosthetics on implants and more
- **aesthetic dentistry** is a set of measures aimed at improving the appearance of teeth and creating an attractive and beautiful smile (correction of small defects, veneers, restoration, whitening);

Dental dental treatment is also included in the list of services. To this end, we have entered into an agreement with the Dobrobut Clinic, which provides us with professional and experienced anesthesiologists.

For 10 years, our company is in the TOP-9 of the national rating «Best company in the industry».

Marked with the certificate of the international rating «Golden Fortune».

Famous people of our country improve their smile in our dentistry, in particular:

- young, talented singer, representative of Ukraine at «Eurovision-2017» – MELOVIN;
- famous TV presenter and restaurateur - Vladimir Yaroslavsky and his family;
- Ukrainian designer of men's clothing - Alexander Gapchuk with his wife and daughter.

The motto of our center (conditionally) - every patient who came to us must be accepted by a doctor. There is no phrase «We cannot accept you» in the lexicon of our administrators.

The scheme works - reminding patients about regular visits to the doctor.

The medical center is open seven days a week!

Calls are accepted around the clock!

SIMPLADENT**«STRATEGIC IMPLANT®» TECHNOLOGY**

The patented implant system that revolutionized implantology

Strategic Implant® technology is a unique technique that radically changed the approach to implant placement. The bicortical implantation technique allows implants to be placed regardless of the degree of bone atrophy and the presence of teeth. Each implant is anchored at two locations in the cortical bone. This bone has a high degree of mineralization and stability and can be loaded immediately.

TECHNOLOGY ADVANTAGES:

- Treatment can be carried out in patients with diabetes mellitus, smokers, drug addicts and other chronic diseases
- One surgical intervention is required to install the implant
- The implant is placed in the existing bone. There is no need for bone augmentation that lasts several months. This allows you to return the masticatory function in a short time
- The use of polished implants prevents peri-implantitis, and the narrow design of the implant is less disruptive to blood circulation than a traditional implant.

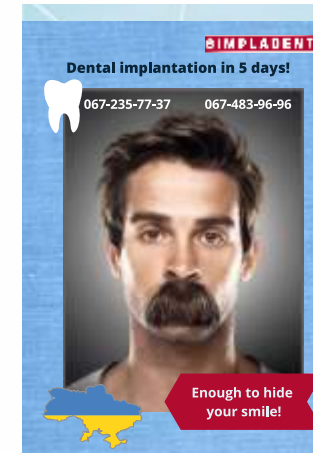

MEDICAL EXPERT**Antonina Reznichenko**

My name is Antonina Reznichenko. I am oncocytologist, have 28 years of medical experience. All my high-level professionalism, medical practice and medical tourism experience, competence to work with patients, I invest in the active development of medical tourism in the Dnipro region in Ukraine. I represent the Turkish Healthcare Travel Council – THTC in the Dnipro city in Ukraine. I am also a member of the Ukrainian Association of Medical Tourism - UAMT.

An important area of activity is the establishment of cooperation and exchange of experience between representatives of medicine from Ukraine and Turkey.

Mission:

- To inform doctors and patients as much as possible about the possibilities of medical clinics and the provision of services for diagnostics, treatment, rehabilitation and health improvement.
- Provide patients with alternative clinic options for diagnosis and treatment and rehabilitation.
- Provide patients with access to treatment in state-of-the-art clinics with innovative technologies.
- Provide full patient support, logistics and follow-up until complete recovery.
- Provide doctors and clinics with information on ways of promotion, development, training and internship, opportunities for participation in International Congresses, Forums.

Medical tourism is an opportunity for travel and medical treatment in a single period of time, it has become especially popular in recent years. This type of tourism allows people from all over the world to most effectively choose solutions to their problems.

In 2021 partner companies from Kharkov came up with an initiative to create the **East Ukrainian Cluster of Medical Tourism**.

We work only with proven medical centers, based solely on their qualification profile and experience gained over many decades. At your service - the entire medical industry known to the world today. Doctors with the highest qualifications and extensive work experience will take care of your health.

Goals of the East Ukrainian Cluster of Medical Tourism

- to promote increased interaction between the public and private sectors
- to attract investors
- to invite new clinics and medical institutions to the project
- accompany them at all stages of obtaining the Participant status
- to provide services that support the activities of clinics, educational and research organizations of the cluster
- to facilitate professional training of Ukrainian doctors in the best medical institutions abroad
- to initiate the participation of Ukrainian medical students in various exchange programs and internships abroad

Our value for the patients:

- provide them with the opportunity to receive medical treatment in the best clinics of the world
- help increase the effectiveness of Ukrainian medicine

For the region:

- to increase the attractiveness of Eastern Ukraine as a medical tourism destination for international patients

For the foreign patients our membership in the Ukrainian Association of Medical Tourism means that we are a reliable partner in organizing a comprehensive medical trip.

GIVE YOURSELF THE PLEASURE OF BEING HEALTHY AND HAPPY!

The **Medical & Spa center «SoulSpa Anti-Age»** is one of the oldest in Ukraine Urban Spa with more than 16 years of successful experience in Age-management.

«**SoulSpa Anti-Age**» is focused on **prevention and wellness**, resulting in a more dynamic life through middle age and beyond.

We provide our guests with the most innovative techniques in **regenerative medicine**. We use the latest global trends in the field of preventive medicine to prolong youth and reveal the body which will help neutralize the signs of aging and restore youth and vitality.

In collaboration with leading biotechnological laboratories from Japan and Ukraine, **our specialists developed unique programs for rejuvenation of the body, with proven efficiency**. The duration of each program depends on guests needs and could take from 3 days to a year.

A short list of programs that we offer our guests below:

- Age-Management
- Long-Covid Rehabilitation
- Weight Loss
- Detox
- Immunity Increasing
- Erectile Dysfunctions
- Bioidentical Hormone Replacement Therapy

Your customized program will be a unique synergy of exercise, optimal nutrition and hormone optimization:

- Stem cells technologies;

Trust is a delicate thing. It never builds up by itself. You need to work hard every day, almost round-the-clock to earn it. You need to be professional and wise, make the right decisions quickly and be willing to help even in the most difficult situation.

What trust is based on is the feeling of safety, when you know that nobody will let you down and you will get a support at a crucial moment.

Rulacom Consult GmbH is a German company that has been organizing medical treatment in leading clinics of Germany since 2000.

Rulacom is a team of people who care and put their heart and soul into their work. Long-term successful cooperation with **Asklepios** – the largest networks of private clinics in Germany and Europe – allowed **Rulacom** to become the only accredited provider of the **Asklepios medical group** services in Hamburg for citizens of Russia and the CIS.

We offer the whole range of medical services: from a three-day executive check-up, to the most complex surgeries that require emergency transportation of the patient to Germany by an air ambulance aircraft.

Our clients are examined and treated in both specialized and multi-specialty clinics in the following areas:

- Obstetrics and neonatology
- Gastroenterology
- Gynecology
- Cardiology and cardiac surgery
- Neurology and timely neurological rehabilitation
- Neurosurgery
- Otolaryngology
- Ophthalmology
- General and visceral surgery
- Orthopedics and traumatology
- Pulmonology
- Vascular surgery
- Urology and other branches of medical practice

Rulacom is happy it could help thousands of patients to find the optimal solution to a variety of health issues.

Rulacom – the company you can trust!

High-tech surgery in the leading cancer center in Hamburg

Asad Kutup, PD, MD is a leading surgeon of the Asklepios Nord clinic, a specialist performing advanced open surgeries and different types of minimally invasive surgeries, which allow to minimize the risk of postoperative complications.

The main types of surgeries carried out by Asad Kutup:

Laparoscopic and open gastric surgeries

Asad Kutup, PD, MD, performs surgeries for stomach cancer. The doctor invites medical oncologists to treat advanced stomach cancer using chemotherapy. It allows reducing the tumor size to make it resectable and successfully remove it during a surgery.

Esophageal surgery

Asad Kutup, PD, MD, conducts effective surgeries for esophageal cancer. Even when a major surgical intervention is required, the doctor tries to perform the operation so that the patient could subsequently have a full-quality life.

Pancreatic cancer

Asad Kutup, PD, MD, confidently carries out surgeries for pancreatic cancer – one of the most difficult to treat.

Intestinal cancer

Asad Kutup, PD, MD, has a considerable experience in treating non-cancerous and cancerous intestinal tumors. He performs both open and minimally invasive surgeries. Asad Kutup cooperates with chemotherapy specialists, if necessary. The abdominal cavity is bathed in a chemotherapy solution right during the operation, which allows to increase the treatment effectiveness (hyperthermic intraperitoneal chemoperfusion).

The doctor specializes in:

- Abdominal and thoracic oncology surgery
- Minimally invasive visceral and thoracic surgery
- Stomach and esophageal surgeries
- Pancreatic surgery
- Hepatobiliary surgery
- Thoracic surgery
- Endocrine surgery
- Colorectal surgery, coloproctology
- Gastrointestinal surgery
- Chronic inflammatory bowel diseases
- Hundreds of patients from the CIS countries.
- Chief Medical Officer of the Surgical Department of the Asklepios Klinik Nord for 4 years.
- 18-year experience at the University Medical Center Hamburg-Eppendorf.
- 45 scientific articles published in major international journals of medicine.

Leave a request at rulacom.ru or phone +49 404 192 49 48 and tell us about your situation.

We will translate your medical documents for **FREE** and offer available treatment options.

Health-Plus International Marketing Arm of Hadassah

Since 2010, **Health-Plus – the International Marketing Service of the Hadassah Hospital**, represents the clinic internationally and it is responsible for receiving foreign patients from Russia, CIS countries, Cyprus and dozens of other countries. Health-Plus provides comprehensive integrated assistance to foreign citizens in need of personalized treatment from leading Israeli experts.

We maintain partnerships with well-known insurance and assistance companies, charitable foundations and international hospitals.

Key areas:

Treatment of orphan diseases at the Hadassah clinic

The Hadassah clinic uses advanced methods of treating orphan diseases - from **enzyme replacement therapy and gene therapy to bone marrow transplantation**. The treatment is carried out under the guidance of internationally renowned specialists such as oncohematologists Prof. Polina Stepensky and Dr. Irina Zaydman.

The Hadassah Clinic is the initiator and participant of many international clinical trials that are conducted in order to find an effective treatment for still incurable fatal diseases. In 2021, **Polina Stepensky's team found a way to treat multiple myeloma with CAR-T therapy**. This discovery is a real breakthrough in the treatment of multiple myeloma that is available to our patients.

Health Plus works with charitable organizations to provide patients with all kinds of help in obtaining financial assistance and providing informational support.

Health Plus cooperates with other hospitals as well:

Israel:

- Sheba Medical Center
- Sourasky-Ichilov Medical Center
- Schneider Children's Medical Center
- Assuta Hospital
- Rabin Medical Center
- Shaare Zedek Medical Center
- Rambam Medical Centre
- ALYN Woldenberg Family Hospital

Cyprus:

- Apollonion Private Hospital
- Platonas Medical Center
- Private Hospital Evangelismos

Imedservice GmbH
Paul Strasse 77
10785 Berlin

im@imedservice.com
imedservice.com

Germany is one of the five countries in the world where 80% of all clinical trials are conducted. According to statistics, in 2016, German medicine took 3rd place in the world ranking of medical tourism and the 1st place in the quality of medical equipment and travel services.

German medicine is the best in Europe and one of the best in the world.

The secret of her success is good funding. Germany allocates over 11% of its GDP for medicine.

In urgent medical situations, when a decision has already been made to go to Germany for treatment, you need a reliable partner and guide who will ensure highest quality medical services and make your stay at the clinic comfortable.

Under stress and anxiety, the patient may face difficulties even before starting treatment: how to choose a clinic and a doctor and how to organize a trip?

Imedservice GmbH is a leading German company with 12 years of history and an impeccable reputation.

We organize treatment only with leading doctors, international specialists, professors and heads of departments of the largest German clinics (Charite, Vivantes, Helios, SANA).

A preliminary consultation with the **Imedservice** coordinator, assistance in organizing and choosing a clinic, doctor, and visa issues is absolutely free.

We, **Imedservice**, are based in the capital of Germany, Berlin.

Berlin is rightfully called the medical capital of Europe due to the largest and oldest University hospital in Europe «**Charite**», as well as the largest healthcare group «**Vivantes**», which has the largest number of medical research institutes in Germany. The entire range of medical areas is covered not only by **Charite** and **Vivantes**, but also by more than 86 clinics located in Berlin.

Imedservice cooperates with the best clinics in Germany, we are specialists in the University Hospital «**Charite**», we have direct access and contact with the heads of clinics, specialists and experts of different fields.

We are also a partner of **Vivantes**, **Helios** and **SANA** clinics throughout Germany. Our company works with Medical Park rehabilitation clinic, which are the best in the world in orthopedics, neurology, recovery after strokes, brain surgery and oncology.

Our company works with Medical Park rehabilitation clinic, which are the best in the world in orthopedics, neurology, recovery after strokes, brain surgery and oncology.

We will be with you and will do our best for your further healthy and quality life. During organization of treatment during treatment, as well as after leaving home.

We care and bear responsibility for each of our clients.

Treatment in Germany DeutschMedic GmbH

Ladies and gentlemen, welcome to the medical capital of Germany.

My name is Dr. Anna Weegen, I am the director of the company **DeutschMedic GmbH** (Essen) and for 23 years specializing in the organization of examination, treatment and rehabilitation in Germany for international patients (adults and children).

The federal Land of North Rhine-Westphalia in the west of the country is the most populated and economically developed area of Germany. There are clinics of eight universities and numerous other medical institutions of all profiles. We are located in the heart of Europe. You can reach us through the international airports Dusseldorf, Dortmund, Cologne-Bonn, Amsterdam, Frankfurt am Main, Bruxelles.

We provide a **full range of services**:

- discussion of the patient's primary data with specialists in Germany, selection of clinic and doctor,
- preparation of estimates for medical treatment (paid directly to the clinic) and additional services,
- optimal planning of outpatient receptions, hospitalization, rehabilitation measures, childbirth in Germany,
- support by qualified translator,
- transfers,
- translating of medical documents from German language,
- independent "second opinion" of German specialists,
- solution of everyday issues during your stay at the examination and treatment, the organization of leisure time.

Most often we welcome patients with severe diseases, which it is impossible to get a modern therapy at the place of residence. We can ensure continuity at all stages of treatment.

Impeccable reputation of **DeutschMedic** and competent approach to work with international patients for many years gained the trust of specialists and administration of clinics in Germany. In turn, our patients appreciate **DeutschMedic** as an independent provider of medical services, oriented exclusively on the profile of the patient to select a doctor and medical institution, individual service, transparency of our work, timely implementation of the obligations assumed. Our team of translators formed for years, it is a time-tested staff who regularly improve their skills.

As an expert on German medicine, I also work with medical managers, doctors, medical tourism agencies - including seminars and "work-shops", abroad or in Essen or in other cities of Germany.

For corporate clients we offer a system of preventive surveys of employees and executives in comfortable conditions and in the shortest terms.

Trust us to organize for you medical services in Germany. We were at the origins of the development of medical tourism and know how to use the best that is in German medicine, for the benefit of our patients.

Who are we? **Treat Plus Travel** - We're licensed medical tourism operators authorized by the Ministries of Health and Tourism in Turkey.

We're located in **Istanbul** and we have been working for our patients since 2015. Our primary resources are DOCTORS! These could be doctors who work for the state or the ones that own or work for a private company but they have to be the absolute best. They are the backbone of our capabilities and the subject of our pride, and we keep in touch with every single one of them day and night whenever necessary.

Our partners are such leading clinics as Acıbadem, Amerikan Hospital, Koç University Hospital, LIV Hospital, Medicana, Memorial, Neolife Oncology Center, NPISTANBUL Brain Hospital, Yeditepe University Hospital, Yeni Yüzyıl University Gaziosmanpaşa Hospital and also the diagnostic center networks of Centermed and Sonomed, laboratory networks of the worldwide-known SYNLAB and many more.

How does this work? We promptly prepare an individual examination/treatment plan accordingly with the requests and complaints of every one of our separately handled patients and present it together with an estimated price. When it comes to surgical procedures, we organize video-conferences in which our patient asks all of their questions of interest. This is FREE OF CHARGE.

Not all illnesses are suitable for tele-medicine. However, we host **online consultations** with our doctors very effectively wherever it's possible. **In other cases, we arrange patient's visit to Turkey.** Every patient has their own coordinator that is a professional medical translator and immerses in all details which helps avoid misunderstandings/loss of information during interactions between the doctor and the patient.

We help avoid high expenses on radiological and laboratory examinations and always offer you lower-budget alternatives that will let you save a lot.

And of course, we organize accommodation and transfers for the patient and help them buy medications, etc.

Treat Plus Travel is when every patient is special!

Health Center 4 (Veselības centrs 4) is one of the largest private multidisciplinary medical institutions in Latvia, taking care of its patients for over 27 years. Health Center 4 has 23 branches and 13 group companies.

Our main directions are **diagnostics, treatment, rehabilitation, and aesthetic medicine** of the highest level. **Health Center 4** offers diagnostics and treatment that are performed by using the latest generation diagnostics equipment, starting from blood analysis to magnetic resonance.

One of the clinics of the **Health Center 4** network - Capital Clinic Riga – offers general health examinations or **check-up programs** that assess the well-being of the most important organ systems in the body.

We have been working with foreign patients since 2009. **Managers of the medical tourism department** assist clients in planning the visits and support patients from the first contact until the last day at our clinic. Every year we provide rapid customer-care to more than 2,000 foreign patients from more than 79 countries around the world.

One of our clinics - **Baltic Vein Clinic** - has specialists with the largest experience in regards to diagnostics and treatment of vein diseases in Latvia and the Baltics. We have also been acknowledged as one of the leading clinics in Europe. Our doctors choose gentle methods of treatment that are known in the world today - **laser surgery, treatment with biological glue, radiofrequency surgery, foam sclerotherapy, steam microimpulse method, and thermocoagulation.** We work with **3rd generation lasers** and **3 different types of biological glue.** Leading vascular surgeon of the clinic, phlebologist **Dr. Ints Udris** has developed a particularly effective, unique and gentle method - endoluminal laser ablation of veins (TOTAL EVLA) – that uses the latest technology - a third generation device with a 1940 nanometer diode laser. During the surgery, a fiber-optic probe with a very small diameter is used, with which it is possible to close all the lateral varicose branches and vein nodes. The doctor has been presenting this method at world congresses for several years now, arousing great interest among other specialists.

News!

Hair transplantation specialist with the greatest experience in the Baltic States have joined our team. Hair is a very important part of our image. That is why, for both women and men, hair loss is a particularly painful issue that can massively affect the confidence of the person. Health Center 4 uses the **FUE hair transplantation method** in which hair is transplanted in the form of grafts (1–4 hairs each). This ensures the natural density of regrown hair in the transplanted area. The FUE method is suitable not only for scalp hair transplantation, but also for eyebrow and beard hair transplantation. During this particular procedure, the client's hair from the back is used - the hair in this area is not subject to loss and retains this feature even after transplantation. The process of hair transplantation is painless.

BEST TREATMENT IN AUSTRIA

Austrian medical science looks back on a history of more than 600 years – and even today the Medical University of Vienna ranks among the leaders of medical research.

To date, promising research projects are being implemented at the Medical University of Vienna, mainly in 5 medical areas - in the field of oncology, cardiology, neurology, immunology and medical imaging.

PremiQaMed group has been successfully operating private hospitals in the Austrian market for 30 years and are among the best private hospitals in Europe. Top-level specialists, many of whom are university professors involved in reputable research projects, treat patients using their unique experience and knowledge.

Well-coordinated collaboration between specialists from different fields is a decisive factor for a successful treatment.

At the same time, the focus is laid on **personalized medicine**, which takes into account the patient's individual biological data during all stages of treatment.

This applies to both prevention as well as diagnosis and treatment of diseases. The «one fits all» approach has become a thing of the past.

Today we know that untargeted cancer therapy is not effective in 75% of cases!

Our goal is to achieve better therapeutic success with fewer drug and therapy side effects with personalized medicine. This success is achieved due to the fact that the dosage is precise and individualized, and the operations are planned and carried out so individually that maximum long-term success is achieved.

Everything from one source healthcare is one of our trademarks. Thanks to the excellent, flexible organization, there is almost no waiting time.

Patients are offered a full range of services - from a simple consultation, extensive check-up programs and complex diagnostics, complex operations, postoperative rehabilitation - all under one roof.

Second opinion is also offered in different medical disciplines.

Our professional team of the international department organize the treatment programs for international patients and support them with all administrative questions.

The most popular medical disciplines include:

- **Women's health** - gynecology, gynecological surgery, obstetrics, infertility treatment, breast health, menopause treatment, preventive medicine. Endometriosis Center
- **Musculoskeletal system**: orthopedics, orthopedic surgery, traumatology, sports traumatology, foot and hand surgery, osteomyelitis treatment, physical medicine and physiotherapy
- **Cardiology** - conservative cardiology, diagnostics and therapy with a heart catheter, treatment of arrhythmias - catheter ablation
- **Gastrointestinal tract** - endoscopy, reflux treatment, abdominal surgery, bariatric surgery
- **Oncology for adult patients** - preventive check-up programs, diagnostics, surgery and individual therapy with new drugs. Focus on solid tumors of all organs, sarcomas, haemato-oncology, internationally certified Breast Health Center
- **Surgery** - general surgery, vascular surgery, oncological surgery, obesity surgery, plastic, reconstructive and aesthetic surgery, ENT
- **Ophthalmology** - computerized surgery
- **Urology** - minimally invasive treatment of prostate adenoma, prostate cancer treatment
- **Preventive medicine** - «Check-up» programs

Top-level medicine combined with cordial, competent and dedicated service and first-class comfort are the factors that define our success for 30 years.
